▾ Blood Components

Please obtain informed consent from patient prior to ordering

O negative red blood cells should be restricted to:

(1) O negative patients; or

(2) women of childbearing potential with unknown blood group who require emergency transfusion

(Choosing Wisely Canada, 2020)

For stable, non-bleeding patients who require transfusion, do not transfuse more than one red cell unit at a time (Choosing Wisely Canada, 2020)

When a Blood Product is selected within the order set, enter the required “Quantity” of products and then enter any product instructions to inform the Blood Bank. When the order is selected, a “Reflex Order” is generated. This “Reflex Order” enables the ordering provider to input transfusion instructions in the blank comment box. Once complete submit the order by entering your eSign PIN.

Blood products can be ordered independent of an order set. See the example below for Red Cell Concentrate. In this example, the word red was typed in the search field to reveal the Red Cell Concentrate order.

Similar to the Blood Transfusion Order, by expanding the order, the user will see a “Reflexed” order where transfusion instructions to the Lab can be entered.
