

# CARE4 MODULE NAME: Add Content

## Overview

This document provides instructions on how to add additional document sections to a document.

- Once you have opened your document, use the menu to the side of the Document title and select add content.

- You can search available content options to find assessments that you may want, different note types or documents such as wound care or common scales used. You can also STAR the content as a favourite so it's available in the future right from the overlay without having to search for it.

- Select the item(s) to add on the right hand side and hit APPLY to add to your current documentation. The content has been added to your documentation for that visit and you can now document on the added sections.

- If you added content in error or the content does not meet your needs for that visit. Select the menu to the right of the section to be removed.

- Select REMOVE SECTION.

- Content is removed from documentation.
