

CARE4 MODULE NAME: Web ED and EDM

BPMH and Admission

Overview

The admission process flow in ED works **most efficiently** if a Best Possible Medication History is completed prior to Admission being completed. This is because the Admitting physician can choose whether the home medications should be **Stopped, Continued, or Held** during their inpatient visit.

Ideal Workflow below:

Current Issue

- Home medications are not being actioned (stopped, continued, or held) in the Manage Transfer because the BPMH has not been completed prior to the Manage Transfer being initiated
- Patients have a delay in receiving their home medications if they are not addressed at the point of admission
- The BPMH would need to be retroactively completed by a pharmacy tech

If an admission is anticipated prior to an admission occurring:

1. Nursing can request a BPMH
2. Physician can request a BPMH

Note: If a Pharmacy Tech anticipates admission, they can complete it without receiving the request from a physician or nurse

This Ensures that the BPMH is completed prior to the admission (Manage Transfer) Occurring

ED BPMH

- Requested
- Select this option if you would like to communicate to pharmacy tech that the BPMH is required
- In Progress
- BPMH Process initiated, but clarification or validation still required.
- Completed
- Pharmacy staff should select this status once all meds are entered and confirmed.
- Once selected, pharmacy staff completes the intervention.

After Saving, this populates the EDM tracker flagging that a BPMH has been Requested
