

## CARE4 MODULE NAME: Provider - All Modules

### Ordering Body Fluid Cell Counts

The screenshot shows the CARE4 Orders interface. At the top, there are navigation icons for Return To, Home, Chart, Document, Orders, Discharge, and Sign. Below this is a teal header bar with a plus icon and the word 'Orders', and a 'SUBMIT' button with a '0' count. The main area has tabs for CURRENT, ENTER, RECONCILE, and TRANSFER. Under the ENTER tab, there are 'Add New' and 'Process Orders' buttons. A search bar contains 'cell count', and there are filters for 'All', 'Pt. Age', and 'Wt.'. Below the search bar, three categories are listed: 'Cell Count, Body Fluid', 'Cell Count, CSF', and 'Cell Count, Synovial Fluid'.

There are six choices when you choose Cell Count, Body Fluid:

1. Pleural
2. Pericardial
3. Peritoneal
4. Synovial (Can also be ordered on its own as shown in above screen shot)
5. Dialysate (use for Effluents)
6. Other (use **ONLY** for rare fluids not included in the above choices)

The screenshot shows the CARE4 Orders interface with the 'Cell Count, Body Fluid' order form open. The 'SUBMIT' button now shows a '1' count. The 'Process Orders' button is active. The search bar is empty. The order form includes fields for Stat (unchecked), Urgent (checked), Provider (Benjamin, Derek Scott), Source (Verbal Order (e-Sign)), Body Fluid Type (dropdown menu open showing options: Synovial, Pleural, Peritoneal, Dialysate, Pericardial), If Other Specify, Site Description, and Comments. There is also a 'Routine' checkbox at the bottom.

\*\*\*\*\*When the **OTHER** choice is selected for rare fluids, you must enter the Type. Site Description is **ONLY** required when Synovial Fluid is chosen.
