## **CARE4 MODULE NAME: PCS**

## Patient Passes (All Sites) Security Levels for Mental Health (RVH)

## **Overview** - Patient Pass

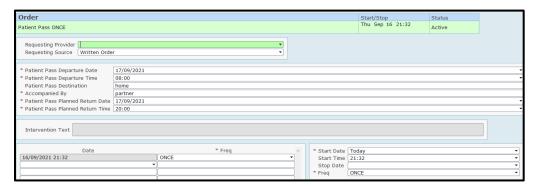

At times during a patient's stay in hospital there may be a need for them to leave on a pass for a specified period of time. Reasons for a pass are varied - may include a trial of managing at home, visits with loved ones, walks outside etc.

Ordering care providers must enter an order for the patient pass to start the process.

The pass will specify date/time/duration of pass as well as who will accompany the patient.

Frequency of the pass is also determined.

Note: A pass is of shorter duration than a LOA (Leave of Absence) which is a separate order and intervention

Once the order is placed, the Patient Pass or Off Unit will be added to the patient's worklist

When you document on the intervention the details of the pass will appear

Document when the patient leaves and details

When the patient returns – document details of their return including any details provided by the patient or their supports

**Order Detail** 

Accompanied By: partner
Patient Pass Planned Return Date: 17/09/2021
Patient Pass Planned Return Time: 20:00

Patient Pass Departure Date: 17/09/2021 Patient Pass Departure Time: 08:00

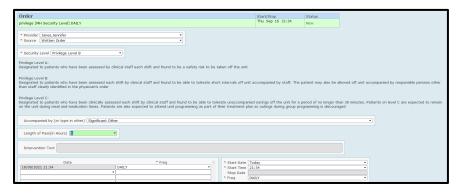

Patient Pass Destination: home

## Overview - MH Security Levels (RVH)

For patients within the Mental Health program, there are times when it is necessary for their well being on the road to recovery to assign a security level

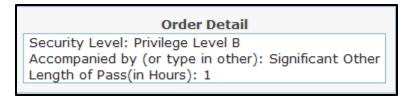

Security levels are ordered by ordering care providers and are assessed regularly. Security level can also be entered as a Nursing Measure

One of three security levels can be ordered. Once ordered the MH Security Level intervention appears on the patient's worklist

On documentation - the order details appear

Document the level, source of order and patient consent and save
