

CARE4 MODULE NAME: PCS eMAR

PCEA (Epidural) – OB and Non-OB; Continuous Peripheral Nerve Block – eMAR

eMAR

eMAR PCEA(epidural – OB and Non-OB)/Nerve Block documentation exists for nursing staff to utilize as a 'double check' against the MD's order.

Order details can be found under Order in Medication Detail

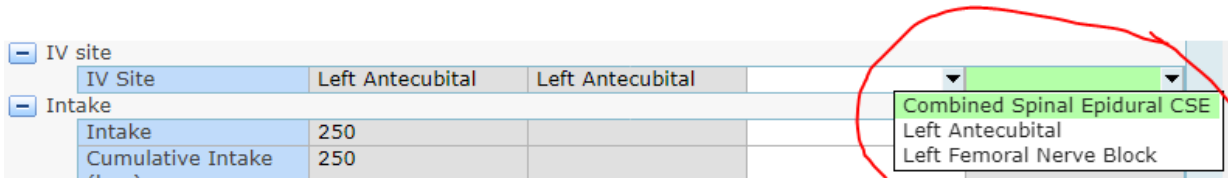

Fields that exist within documentation that nursing will document on may include

- **Infusion Type**
- **Basal Rates; Bolus Dose**
- **Max Doses; Clinician Dosing**
- **Time Limits; Attempts and Injections**
- **Max and Minimum Infusion Rates**

RASS and Pain Assessments will be on appropriate eMAR documentation and used as per order set/protocol to change basal/bolus if appropriate

All are attached to IV titratable flowsheet – and has the same functionality as IV flowsheet (rates up/down/stop etc.)*. To ensure that appropriate titratable 'sites' appear on eMAR - appropriate documentation should be completed on worklist PCEA Epidural Spinal or Combined Peripheral Nerve Block

Assessments will not auto populate to worklist – staff need to add. Once complete then sites can be chosen from eMAR/IV titration site*

if a drug/infusion is given as bolus only (no basal/continuous rate) gas gauge will not change to alert nurses if bag is near empty

PHA rules apply for Independent Double Check/PIN before filing eMAR may be required based on action and drug
