Lab Specimen Collection – How to Modify the Specimen Collection Source

Overview: When reviewing current orders for your patient – review the specimen collection source and if it is not correct, you need to modify.

For example:

- Patient transferred from ICU to Medical Unit may have bloodwork ordered as Pre-Collection because the ICU nurses collect their own blood. In this scenario the collection would need to change to Send Someone from the department to ensure the lab will collect.
- Patient has a PICC/CVAD – collection may need to change to Pre-Collection since the Lab will not be collecting.
