

CARE4 MODULE NAME: PCS/EDM

Paeds/NICU co-sign on TC52 scanners

Overview

A code change has been deployed to MEDITECH Expanse to allow for the Independent Double Check assessment (co-sign without PIN) to prompt on the TC52 enhanced scanner for paediatric and neonate patients.

Using the TC52 enhanced scanner, scan your patient armband and applicable medication barcode. User will be prompted with the MAR Co Signature No PIN assessment on the enhanced scanner.

Obtain your Independent Double Check on the medication, click on the assessment, search the name of the user who performed the independent double check and click "Find". Click on the name of the user. Prior to saving administration, user should see the MAR Co Signature No Pin assessment and the name of the co-signing user that they selected.
