

# CARE4 MODULE NAME: Physician Systems

## New Manage Transfer Defaults

### Overview

Currently, all categories in the manage transfer are defaulted to STOP (except for Microbiology and Pathology orders as this was a recent change).

However, an issue still exists with diagnostic imaging orders and telemetry orders being stopped unintentionally upon transfer (since the defaults for diagnostic imaging and telemetry are set to STOP). Diagnostic Imaging departments and/or nursing units are having to call physicians and ask if they truly wanted these DI orders / telemetry stopped.

### What is Changing

When physicians enter the transfer routine, Diagnostic Imaging orders and Telemetry orders in the **reconcile** tab, will be set to **continue** (e.g., MRI, Radiology, Telemetry orders) See image below:

Orders						SUBMIT
HISTORICAL	ENTER		RECONCILE		TRANSFER	
	Reconcile	Add New	Preview			
<b>Transfer Orders</b>						
Orders	Ordering Provider	Start	Stop	Now		
	Transfer Provider	Status				
	me	Continue	Stop
