

CARE4 MODULE NAME: Physician Systems

New Manage Transfer Defaults

Overview

Currently, all categories in the manage transfer are defaulted to STOP (except for Microbiology, Pathology, Diagnostic Imaging, and Telemetry orders as this was a recent change).

However, an issue still exists with consult and referral orders (since the defaults for these orders are set to STOP). Referrals and Consults are potentially being stopped when they should remain active.

What is Changing

When physicians enter the transfer routine consult and referrals orders in the **reconcile** tab, will be set to **continue** (e.g., APS Referral, Physio referral) See image below:

The screenshot displays the 'Orders' interface in the CARE4 system. The 'TRANSFER' tab is active, showing a table of orders with columns for 'Orders', 'Ordering Provider', 'Start', 'Status', 'Stop', and 'Now'. The table is categorized into 'Current Orders', 'Transfer Orders', 'Consult', 'Post Discharge/Outpatient Appt', and 'Referrals'. Several rows are highlighted with red boxes, showing the 'Status' dropdown menu set to 'Continue'.

| Orders | Ordering Provider | Start | Status | Stop | Now |
|---|-------------------|---------------|----------|------|--------------------------|
| Consult General Surgery Order | me | Upon Transfer | Continue | Stop | <input type="checkbox"/> |
| Out of Hospital/Test/Consults/ Procedures Order | me | Upon Transfer | Continue | Stop | <input type="checkbox"/> |
