CARE4 MODULE NAME: PCS, EDM and SUR
Practice Hint: ALC Workflow

DID YOU KNOW?

Overview: In Expanse, designation of ALC (Alternate Level of Care) is done through ALC orders. The ALC order sends information to WTIS

Physicians (and at some sites PFNs) are responsible for initiating ALC designation
- Initial (New or Original Order)

Patient Flow Navigators (or designates responsible for ALC designation- site specific in the absence of a PFN) (**ONLY**) are responsible for managing ALC designation
- Changes to Information
- Discontinuation
- Re-designation
- Discharge

This includes the Orders and the ALC intervention documentation

Need a change to a patient's ALC designation? Connect with your Patient Flow Navigator/site designate to discuss- they will make the appropriate change in orders and documentation

MD Designates as ALC	• MD enters order - ALC Alternate Level of Care (Physician) • ALC WTIS Alternate Level of Care intervention populates Worklist
WTIS - New Designation ALC	• ALC Coordinator documents on ALC WTIS Intervention • ALC Designation (New) order is triggered sending data to WTIS
WTIS - Changes to Info	• ALC Coordinator documents changes on ALC WTIS intevention • ALC Changes order is triggered sending data to WTIS
WTIS - ALC Discontinued (if needed)	• ALC Coordinator documents on ALC WTIS intervention for discontinuing ALC i.e. unstable medically • ALC Discontinued order is triggered sending data to WTIS
WTIS - ALC Redesignation (if needed)	• ALC Coordinator documents redesignation on ALC WTIS intervention • ALC Redesignation order is triggered sending data to WTIS
Discharged	• Patient is discharged in Expanse that will send data to WTIS • No order is required
