

CARE4 Update

What you need to know

October 22, 2021

ED Lab Convenience Sets: All four partner sites now have ED Lab Convenience Sets live for ED physician ordering convenience. A total of 45 convenience order sets built and approved since GO LIVE.

MRI Screening Questionnaire: When an MRI is ordered on an ED or admitted patient, please pay attention to the “MRI Screening” intervention that was ordered at the same time. That order contains the screening assessment that is required before a patient can safely enter the MRI. The results of that assessment are sent to the imaging department. Delays in providing that information could delay patient care. Please see the [tip sheet](#) for additional details on the process.

Wound Care Assessment Changes: At the beginning of the intervention a new question is required to be completed: “Is documentation required on this wound?”. These changes have been made to allow documentation of only one wound in the event the patient has multiple, but they were not assessed at the same time. The tip sheet is available [here](#).

Rounding: Purposeful Rounding has changed to an “I did it” documentation. When the care provider clicks to document purposeful rounding every hour a pop up box will appear with the focus of purposeful rounding. The care provider is then able to save that this intervention has been completed. There will be a “P” indicating a protocol is linked to this intervention. This Protocol can be viewed at any time and provides a full description of what Purposeful Rounding includes. Click [here](#) to see the step by step process with screenshots.

ADL Activities and Care for Daily Living: The ADL intervention has been updated to better capture patient’s needs and abilities as well as the care provided to them by the team. The ADL intervention will now include elimination (bowel elimination and urinary elimination) that was previously seen in Physical Assessment. These components will no longer be documented in Physical Assessment to ensure all documentation of elimination is found in one location and avoid duplicate documentation. Click [here](#) to see screenshots of the new components of ADL Activities and Care for Daily Living. **Physicians** will also be able to see this documentation within Web MD by utilizing the ADL widget and can view the tip sheet [here](#).

HRM/Web MD: Reminder that reports that were delivered to physician offices via fax during the suspension period (September 19 to October 11) were held in a sequenced queue and have now flowed to HRM. We have officially tuned off the interim auto-faxing solution for HRM reports. Physician’s offices will manage the reconciliation of the HRM reports that match the previously received faxed copies, and ensure required patient follow-up has been completed.

Accessing Support

Refer to Resources

Refer to the CARE-4.ca website or CARE4 Project app to access to tip sheets & training materials.

Superuser or CAREbot

You and your colleagues are becoming the experts! Share your knowledge with others and ask for help if you need it. Speak to your Superusers and CAREbots as they return to their regular shifts.

Call for urgent support

If an urgent problem arises within Expanse that prevents you from providing safe patient care, call your local IT Service Desk and your call will be re-routed to the Regional Expanse Clinical Support Line.

Visit CARE-4.ca or download the CARE4 app to access valuable GO LIVE information
